

Using Intect[®] 7 is very easy. It involves a simple 3 step procedure.

1. **Dip** the numbered reagent end of the test strip in urine sample and remove immediately. Alternatively, the urine sample can be pipetted onto each pad of Intect[®]7.

2. **Blot** the strip to remove excess urine.

3. After **one (1) minute, read** and **compare** the numbered test areas with corresponding panels in the color chart.

Intect[®]7 is a preliminary screening test. Positive results should be sent to a laboratory of confirmatory
